ENGINEERED BENEFITS

Kaskad®

Kaskad

Kaskad contains 500g/kg triflusaluron-methyl and is a herbicide controlling broad leaved weeds in crops of sugar beet and fodder beet.

Kaskad is a reverse engineered Debut. A water dispersible granule formulation with a high level of activity. Kaskad works by mainly foliar activity and should be applied to small actively growing weeds.

For more information including product label, safety data sheet and compatible tank mixes see the Life Scientific website or download the App to get product information direct to your phone.

Weed Control

The table below shows all weeds that are fully susceptible to 30 g/ha Kaskad with a suitable tank mix partner such as either 1.1 L/ha phenmedipham containing 160 g/L phenmedipham or 1.1 L/ha phenmedipham and 0.5 kg/ha metamitron containing 700 g/kg metamitron.

WEED SPECIES

Black Bindweed	Field Pansy – Moderately susceptible. For control increase the dose rate of phenmedipham to 2 L/ha	Red dead-nettle
Charlock	Fools Parsley	Redshank
Chickweed	Fumitory	Small Nettle
Cleavers	Knotgrass	Volunteer Oilseed Rape
Fat – hen	Mayweed, Scentless	

Product Performance

Trials in the north of France with Kaskad and Debut have been looking at crop safety as well as comparing weed control.

Both products are being used at 20g/ha and 60g/ha in mix with an adjuvant and the products shown opposite and applied at 2, 4 and 6 leaves of the crop.

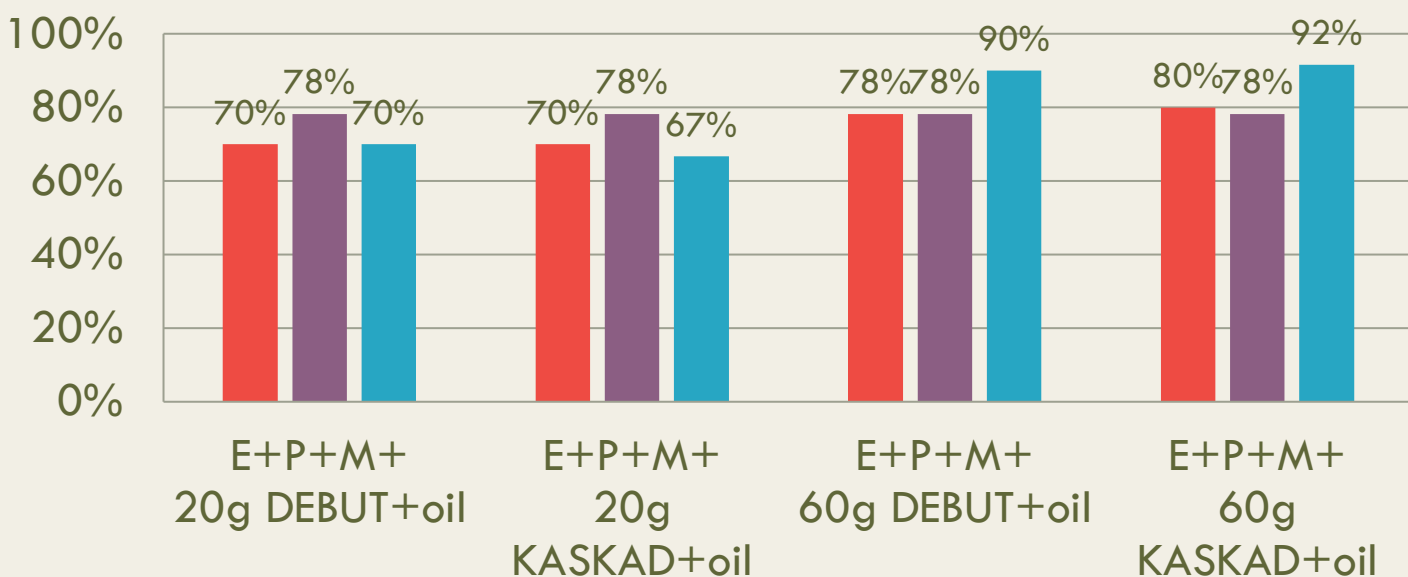

The graph below shows no significant differences between the two products for weed control.

Even at the higher use rates of 60g/ha no phytotoxicity was seen in the trial.

PRODUCT	DOSE
Ethofumisate 500g/L	0.2L/ha
Phenmedipham 160 g/L	1.0L/ha
Metamitron 700g/L	0.6kg/ha
Kaskad/Debut	20gm/ha
