

The following tank mixes are supported for physical compatibility with Niantic at recommended rates of use and will mix in the sprayer tank.

No tests have been undertaken on crop safety or product performance, therefore use is at users own risk.

SPRING Tank mix sheet provides information in addition to what appears on the product label for Niantic.

In the spring, for best results, Niantic + Probe/Biopower should be applied alone.

If tank mixing is necessary, then Life Scientific will support the physical compatibility of tank mixes of Niantic + Probe/Biopower with only one of the products listed below.

Before using any tank mixture, consult and comply with the recommendations of the partner products.

Each product should be added separately to the bulk of the water in the spray tank and thoroughly mixed before adding the next chemical. Probe/Biopower should be added last.

Always use constant agitation of the sprayer tank during mixing, transportation and application. Spray immediately.

PLEASE NOTE:

The following tank mixes are supported for physical compatibility with NIANTIC at recommended rates of use and will mix in the sprayer tank. No tests have been undertaken on crop safety. Provided that all product recommendations are adhered to NIANTIC may be applied in mixture with the following pesticides:
